Identity is EVERYWHERE

The private identity

Parts of yourself for you and your loved ones.

A quiet conversation, an embarrassing memory, the thoughts in your head. It's unique, It's you.

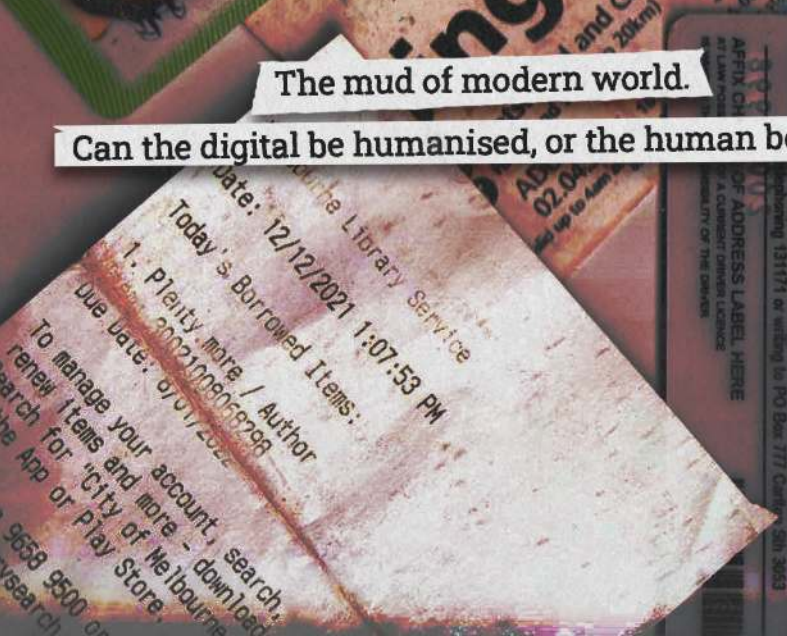

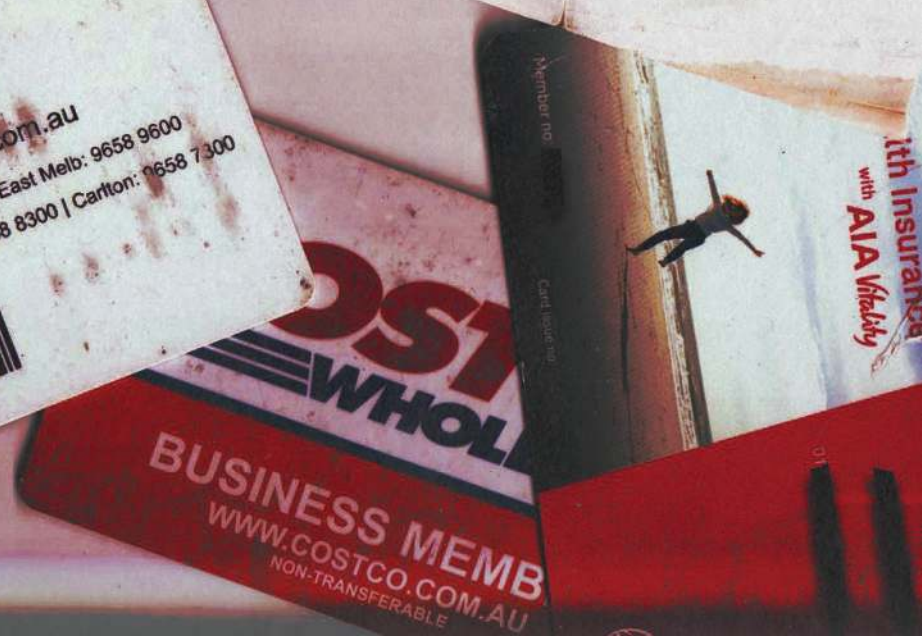

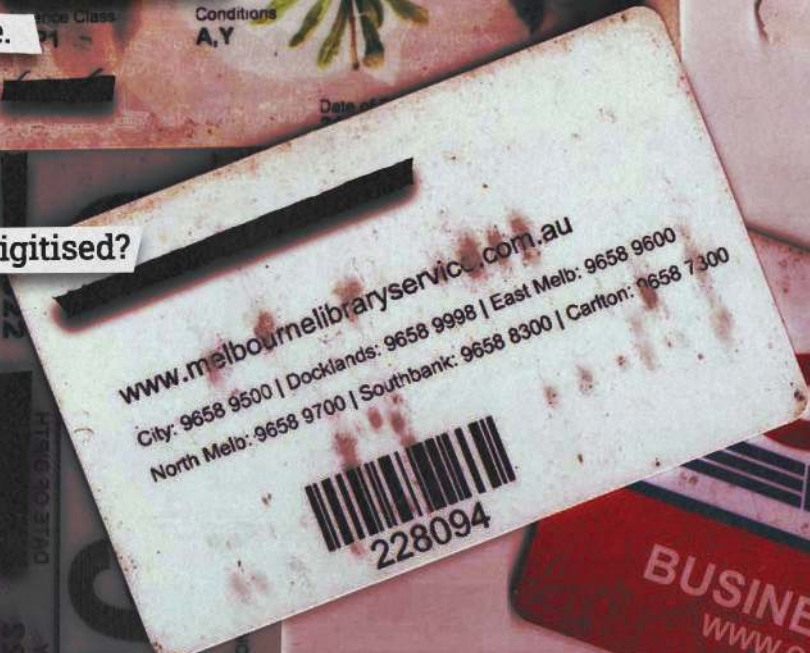

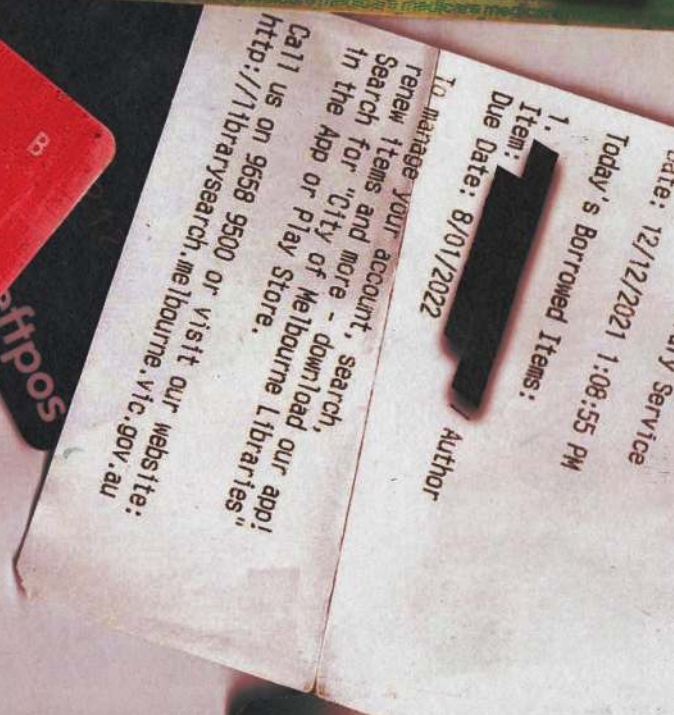

The public identity

your social media handle, your driver's licence, your tax forms.

Aspects that are recorded for others to see.

The mud of modern world.

Can the digital be humanised, or the human be digitised?

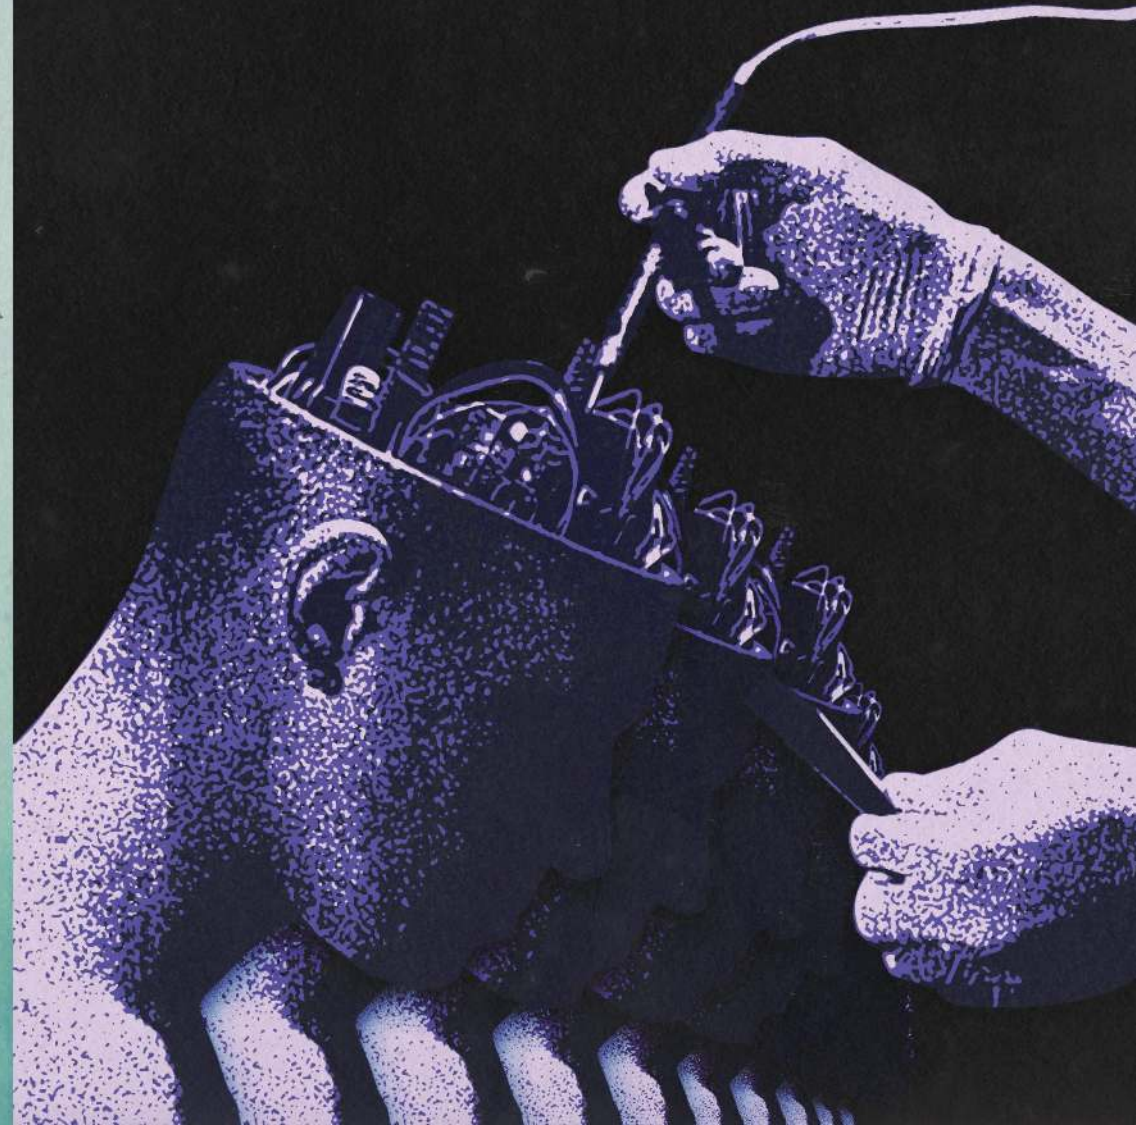

Data mine

SURRENDER

EXPERIENCE MASS DATA SURVEILLANCE

From:

SESSION SESSION SESSION SESSION

Tech companies and governments around the world are on a mission. The goal: become the controllers and creators of the so-called universal digital login.

Do your taxes. Talk to your friends. Sell your old skateboard. All with one login — it's just that easy.

No matter where the internet takes you, you've got a key to every single door.

It started with 'Login with Facebook'. The other giants of the tech pantheon soon followed. Various forms of government around the world have tried their hand as well.

All these digital identity programmes follow a centralised and ubiquitous model.

The central digital identity is linked to multiple IDs, services, and purposes.

This creates a robust framework for logging, tracking, and profiling your everyday activities. It ushers in a new era of surveillance.

Your identity is not a commodity. It isn't a login, an entry in a database, or a marketable behaviour metric. Your identity varied and complex, and it belongs to you.

Surveillance capitalism wants to break you into your smallest, most sellable parts.

But it's not really about data, it's about people — the internet is not really made up of things, it is made up of people.

Do not accept the deployment of
unified digital identities. Embrace human
diversity, choice, and dignity.

“Digital Identification”
Dont forget to tap on.

SESSION

How much does a phone number cost? A few dollars? Some personal info? But those eight numbers are worth their weight in gold. You can't live without them. One person, eight digits, one identity. Anyone. But how much does a new identity cost?

SESSION

KILL YOUR PHONE NUMBER

Leave no trace! Use **SESSION**, the world's most secure messaging system. You'll never need a phone number again thanks to your new ***SESSION ID***

Identity is a critical social, political, and technological issue. In the digital age, the technology we create mirrors our political and social realities.

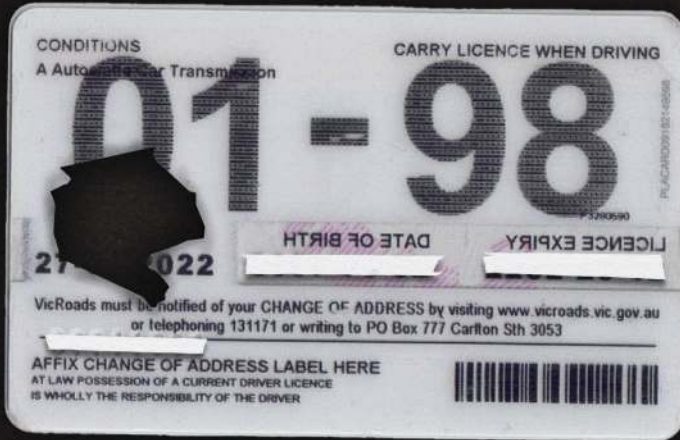

Tech codifies our world — sometimes the good, sometimes the bad.

Because of this, it's important to consider what social and political factors are influencing technology; why people advocate for the technologies they do; the human impact of tech.

Years ago, the legends of the internet realised that code, software, and the cybersphere, would be the new engine of activism. A fundamental part of this: identity. Anonymity. Pseudonymity. Without it, the internet isn't possible.

Session is just one part of a much, much bigger movement. We might not know who you are, but we know that you are. There are billions. Are you with us?
